# Assignment no. 1

**Exercise 1 (10 points)** Set up a Python 3 notebook environment for use in this course. To do so, either set up a cloud solution or perform a local installation on the system of your choice (for both options, instructions are available on Moodle). What you choose is up to you. Test your environment by executing the notebook `ML_Recap.ipynb` entirely. Make one significant change to the code, mark this change clearly in the code, and export the entire notebook to an HTML file. *Hand in this file!*

**Submission:** electronically via Moodle; Deadline: Mon, Nov 4, 2024, 1:00pm.
